Making Connections: Sociology in the Real World Access to television and the internet has brought the lifestyles and values

Could the Internet affect the way humans think? On the one hand, we have unprecedented access to an enormous library of information. Answers to questions ranging from "What is the Big Bang theory?" to "How long should I let dough rise?" are just a couple of clicks away. But does that information come at the cost of our own ability to think? Advertisement. There does seem to be a correlation to the way we record and access information and the way we think. As we develop systems that allow us to save our knowledge for posterity, we unload that burden onto an inanimate object. Internet culture (i.e. culture of its users) is rapidly developing. Rules and regulations are initially developed by implementers (programmers, but gradually as the result of interference of the latter ones and the users, they are changing and reshaping and the new ones appear. In particular, the culture of social network users vocabulary is changing.Â The Internet as a valuable social and cultural (creative) platform causes (promotes) unlimited access to information, daily life patterns, the acceleration of the pace and dynamics of social interaction. Considering the Internet coverage in Russia based on RPORC (Russian Public Opinion Research Center) research and statistics there is likely to be a further growth of the platform.
