The need for a bibliography of Medieval vessel glass was expressed at the one day conference 'Medieval Glass from British Sites AD 1000-1600' held at the Museum of London in March 1992. It is intended especially for those dealing with vessel glass from British sites, the main section being 'British Excavation Reports and Other Finds'. Although entitled 'British', we know of no currently published significant glass in Scotland, Ireland or Wales.

The date range covers mainly AD 1200-1500, including the few fragments of the 11th/12th centuries, and some slightly later material, of overlapping forms, is included. Single undiagnostic fragments have not been included. Date ranges are given as far as possible, as published. The other sections are intended as broad introductions: General Surveys, Production and Composition, Glass from other Countries, and Other Sources of Evidence. The major publications are marked *.

We are grateful for the advice of members of the Board of the Association for the History of Glass, including Patricia Baker, Robert Charleston, Ian Freestone, Jennifer Price and Hugh Tait, as well as Catherine Mortimer and Martine Newby. We would be grateful for any suggestions for additional inclusions, or newly published references.

PRODUCTION AND COMPOSITION

Despite analysis, very little is known about the composition and production of Medieval glass, which is summarised by Ian Freestone (1993). The most significant recent discovery is that some vessels contained up to 75% lead - see Baumgartner E, Krueger I, (1988), 161-175, (under 'General Surveys'). Furnace sites from England are included in this section; those from Europe are found under their relevant countries.

BRITISH EXCAVATION REPORTS AND OTHER FINDS

This section is divided into regions, and includes all published Medieval Vessel Glass, except where it is only mentioned but not described, or if there is only one undiagnostic fragment. Entries are annotated to give a brief description of the glass described. It is specified if fragments are known to be unstratified, although some of the stratified fragments have no dating evidence. Glass is listed under the place **found**, rather than the place of origin.

The *Journal of Glass Studies* (Corning Museum of Glass, New York, from 1959) publishes a 'Check List of Recently Published Articles and Books on Glass' at the back of each volume.

The *British Archaeological Bibliography* is now published twice a year, with abstracts from books and journals, and 'Glass (vessel)' indexed in the 2nd volume of each year. Until 1991 published by the Council for British Archaeology, combining the former British Archaeological Abstracts (1968-91), the Archaeological Bulletin, and the Archaeological Bulletin for Great Britain and Ireland (1950s-1980s). From 1992 at: Institute of Archaeology, UCL, 31-4 Gordon Square, London WC1H 0PY.

The *Art and Archaeology Technical Abstracts* (formerly the *International Institute for Conservation Abstracts*) have been published twice a year since the 1960s by the Getty Conservation Institute and the International Institute for Conservation of Historic and Artistic Works, California. They cover dating, analysis, deterioration and conservation.

The *Bulletins de l'Association Internationale pour l'Histoire du Verre* published by the AIHV at Liège from 1962, contain surveys of the glass in museums of the country hosting the Congrès: Holland, Poland, Syria, Czechoslovakia, Belgium, Tunisia, W. Germany, Italy, excepting the British issue which contains articles by period (see Charleston RJ (1980a)). The Association also publishes the papers from each congress as the *Annales*, which are referred to in the bibliography as relevant.

Additionally, the *Association Française pour l'Archéologie du Verre* sends out bulletins and has its own conferences. Contact: G. Sennequier, Musée des Antiquités, 198 Rue Beauvoisine, 76000 Rouen, France.
