handbook of normative data for neuropsychological assessment

When Handbook of Normative Data for Neuropsychological Assessment was published in 1999, it was the first book to provide neuropsychologists with summaries and critiques of normative data for neuropsychological tests. The HRNES was rejected even though it fully meets the Handbook's selection criterion for tests to be included in the book. PMID: 14591469. [Indexed for MEDLINE]. Free full text. It provides scores for assessing immediate memory, new verbal learning, susceptibility to interference (proactive and retroactive), and retention of information after a period of time and memory recognition [2], [3], [4].
