Solver is a Microsoft Excel add-in program you can use for what-if analysis. Use Solver to find an optimal (maximum or minimum) value for a formula in one cell – called the objective cell – subject to constraints, or limits, on the values of other formula cells on a worksheet. Solver works with a group of cells, called decision variables or simply variable cells that are used in computing the formulas in the objective and constraint cells. Solver adjusts the values in the decision variable cells to satisfy the limits on constraint cells and produce the result you want for the objective cell. After you define a problem, click Options in the Solver Parameters dialog box. In the Options dialog box, select the Show Iteration Results check box to see the values of each trial solution, and then click OK. From the Publisher. #BeUnstoppable with Problem Solving Cases In Microsoft Access & Excel! [View larger](#). [View larger](#). [View larger](#). [View larger](#).
