Robert Hooke was one of the foremost experimenters of the 17th century and a remarkable inventor of astronomical instruments. He was among the first to suggest the inverse-square law of gravitation and the periodicity of comets. Hooke was the son of John Hooke, curate of All Saints Church in Freshwater, and his second wife Cicely Giles. A sickly child, he was not expected to survive childhood. At a young age Hooke showed artistic and mechanical talent; he could draw and paint and build wooden models of machines that worked. When he was 13, his father died, and Hooke was sent to London to be an apprentice. Includes Robert Hooke's Lectures and discourses of earthquakes and subterraneous eruptions.
