Since infants with this syndrome are prone to respiratory infections, The care of the infant or young child with Down syndrome can be

The baby was then rushed to Children's Hospital Boston, a leading center in respiratory distress syndrome (RDS). Unfortunately, despite the best medical efforts, the baby died two days later. The death of the newborn baby devastated the First Family. Through the ages, infant death has been attributed to an inability of the newborn to adapt to life outside the uterus. In the early 20th century, "hyaline membranes". Further study on infant respiratory distress syndrome (RDS) found that the deficiency of surfactant was a consequence of either insufficient production by the immature lungs or a genetic mutation in one of the surfactant proteins, SP-B. The rarer genetic form of the disease is not associated with premature birth and occurs in full-term babies (10). In premature infants, respiratory distress syndrome develops because of impaired surfactant synthesis and secretion leading to atelectasis, ventilation-perfusion (V/Q) inequality, and hypoventilation with resultant hypoxemia and hypercarbia. Blood gases show respiratory and metabolic acidosis that cause pulmonary vasoconstriction, resulting in impaired endothelial and epithelial integrity with leakage of proteinaceous exudate and formation of hyaline membranes (hence the name). Positioning for acute respiratory distress in hospitalised infants and children. Cochrane Database Syst Rev. 2005. CD003645. Table 8. Inhaled Nitric Oxide Therapy in Preterm Infants and Outcome Measures. Table 1. Meta-Analysis of Early Versus Delayed Surfactant Treatment of RDS. Upper Respiratory Tract Infection Most respiratory virus infections in early childhood are confined to the upper respiratory tract, leading to symptoms of the common cold, with coryza, cough, and hoarseness. Upon examination, rhinitis and pharyngitis are found and are frequently associated with some conjunctival and tympanic vascular injections. In some cases, symptoms and signs of otitis media occur, such as earache, tenderness of the tragus upon pressure, and a red bulging tympanic membrane upon inspection. Upper respiratory tract infection (URTI) in infants is often accompanied by fever and
