Arctic and Antarctic - A modern geographical synthesis. Blackwell, Oxford, 472p. AAR Figure 3.25. Arctic and Antarctic: a modern geographical synthesis David Sugden The history of Antarctica emerges from early Western theories of a vast continent, known as Terra Australis, believed to exist in the far south of the globe. The term Antarctic, referring to the opposite of the Arctic Circle, was coined In August 1895 the Sixth International Geographical Congress in London passed a general Antarctic Environments and Resources: A

Arctic and Antarctic - Comparisons & Similarities North Pole v South Pole. North Pole. South Pole. There is also an effect that the weather in Antarctica is driven round and round the continent by circumpolar winds and currents so keeping it within Antarctica, whereas the weather in the Arctic spills out to the south and weather from the south spills into the arctic, this adds to Antarctica being colder than the Arctic as it keeps its cold to itself. Arctic and Antarctic by David E. Sugden, 1982, Barnes & Noble edition, in English. a modern geographical synthesis. by David E. Sugden. Published 1982 by Barnes & Noble in Totowa, N.J . Written in English. Arctic and Antarctic differ a lot when it comes to the human activity and animal and plant life existent on them. The Arctic region has towns and other living places. It has indigenous people such as Inuits, Indians and Siberians. This is the reason why the Antarctic region is considered colder and windier than the Arctic region. Antarctica is covered by ice throughout the year, less than 5% of Antarctica is free of ice. Antarctic has remained an unpopulated area throughout the history. It is devoid of towns and living places. It does not have indigenous people nor have any large land animals. But, the Antarctic region is qualified by the presence of marine mammals such as penguins, whales and seals.

Arctic and Antarctic - Comparisons & Similarities North Pole v South Pole. North Pole. South Pole. The Arctic is not as cold as the Antarctic for two main reasons, firstly the effect of the sea that doesn't fall below -2°C which means that the whole of the arctic polar region and coastal regions are kept relatively warm even though the sea is covered by ice. Secondly, Antarctica is the highest of all the continents at an average height of 2,300m (7,546 feet or 1.4 miles) more than twice the average height of Asia, the next in line and 3-6 times as high as the other continents. Geographers favouring a more traditional re- gional approach may be disappointed, for example. in the relatively brief attention to biogeography. David Sugdens achievement, however, is in expkaining the nature and functioning of polar lands. Any further detail required by the reader on any aspect o f polar geography should be available in the excellent selection of reading referred to.
