nuclear medicine technology and techniques

Nuclear medicine is a medical speciality in which radioactive materials are used for diagnosis by imaging and non-imaging techniques and for therapy in many disease processes. Nuclear medicine technologists (NMTs) and radiographers (NMRs) often perform similar roles; however, in many European countries they are separate professional groups and their training can be highly specific to nuclear medicine (NMTs). In all cases they are highly specialised and they work alongside other healthcare professionals to play highly responsible roles in patient care, management, imaging and radiation protection. ⁹ Medicine & Health Sciences. Apple.

Nuclear medicine is a medical specialty involving the application of radioactive substances in the diagnosis and treatment of disease. Nuclear medicine imaging, in a sense, is "radiology done inside out" or "endoradiology" because it records radiation emitting from within the body rather than radiation that is generated by external sources like X-rays. In addition, nuclear medicine scans differ from radiology as the emphasis is not on imaging anatomy but the function and for such reason, it is called
