

# NOTABLE COMPUTING BOOKS AND ARTICLES—2013

---

*Computing Reviews* is happy to bring you the second annual list of notable items published in computing—this time for 2013. This year, we reached out to many in the computing community for nominations: our reviewers, *CR* category editors, the editors in chief of journals we cover, and computer scientists in both industry and academia.

We received a total of 108 nominations, but excluded those that were self-nominations or published outside of the 2013 calendar year. Therefore, you will find 94 items on our list, with numerous publishers represented.

As we continue to improve our methods for collecting nominations and involve more of your peers in the computing community, we hope to bring you even more definitive lists in the coming years!

We welcome your feedback, and encourage you to email us with any questions ([editorial@computingreviews.com](mailto:editorial@computingreviews.com)).
