The authors are acknowledged leaders in the field, from both sides of the Atlantic. Surgical trocars used for laparoscopic surgery are precision-engineered instruments with enhanced safety and function. The trocars are designed to be leak-free and remain stable during the procedure. One of the fundamental techniques of laparoscopy involves creation of a pneumoperitoneum by inflating the abdomen with carbon dioxide to create separation between organs and increase the internal space available for manipulation of surgical instruments. Insufflation, as it is known, can be performed using a Veress needle prior to placement of the primary trocar, or via the trocar itself, through a gas intake port, typically located on the side of the outer housing.
