How many cranial nerve pairs are there and where in the brain are they located? 12 pairs of nerves, primarily on the ventral side of the brain/brainstem. What are the different properties of the Autonomic Nervous System? Sympathetic and Parasympathetic dual innervation leading to a physiological balance homeostasis - consistency of the internal environment. What are the three different types of neurons and their processes? Studies were reviewed independently by two readers, and data collected were confirmed by a third reader. Of the 214 studies identified, 29 studies reported data on the impact of using specific neuroanatomy teaching tools. Our work highlights the progressive interest in the study of neuroanatomy teaching tools over the last years, as evidenced from the number of publications and highlights the need to consider new tools, coping with technological development in medical education. Open Peer Review reports. Background. Then, the full text of all screened manuscripts was carefully read. All data collected was confirmed by a third reader (M.F.), and discussions occurred until a final consensus was reached. Charting, collating and summarizing the data.
