Color Atlas and Synopsis of Pediatric Dermatology provides large, detailed full-color photographs of skin lesions in children, along with the latest management and treatment recommendations. Modeled after Fitzpatrick's Color Atlas and Synopsis of Clinical Dermatology, this essential point-of-care companion delivers everything you need to confidently assess, diagnose, and manage diseases of the skin, hair, and nails in pediatric patients encountered in a busy clinical environment. However, this being a "synopsis of pediatric emergency medicine"™, the chapters are not complete enough to prepare a formal lecture. References are not given at the end of chapters. After the "medical"™ chapters are trauma-related sections. Major trauma, neurotrauma, neck, thoracic, abdominal, ophthalmological, otolaryngological, orthopedic, and dental trauma are covered in good detail. The highly organized format of the text accompanied by 1187 full colour images, including 450 illustrations new to this edition, make the Color Atlas and Synopsis of Pediatric Dermatology an excellent visual reference for consultant paediatricians, dermatologists and students. Fully revised new edition 1187 full colour images including 450 new illustrations New chapters and up-to-date information Highly organised visual format Previous edition published 2009.
